Control of Enteric Pathogens by Host Immunity and the Microbiota

Abstract:
The mechanisms that allow pathogens to colonize the intestine and to cause disease are poorly understood. Our laboratory is using Citrobacter rodentium, a mouse pathogen that models human infections by enteropathogenic E. coli, to understand the mechanisms that regulate the colonization and clearance of the pathogen in the gut. These studies have revealed how the pathogen colonize and replicate successfully in the intestine early during infection and how the host immune system and the indigenous microbiota cooperate to eradicate the pathogen in the later stage of the infection.

Wed. June 17
12:15 -13:30
Clinical Lecture Room B in Medical Area

Guest Speaker
Dr. Gabriel Núñez
Professor, University of Michigan
Department of Pathology and Comprehensive Cancer Center

This seminar will be held as a part of the class “World Science Leaders’ Seminar” in Human Biology Program

Ph.D. Program in Human Biology
School of Interactive and Global Majors (SIGMA)
